#### Faculty of Science and Technology Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-V Credits: 3 - 0 - 0Course Code: HSM-301 Course: Engineering Economics, Finance and Mid Semester Examination-I: 15 Marks Mid Semester Examination-II:15 Marks Costing Teacher Assessment: 10Marks **Teaching Scheme:** Continuous Internal Evaluation: 10 Marks Lectures: 03 Hrs./ Week End Semester Examination: 50Marks Tutorial:-- Hr./ Week End Semester Examination (Duration):02Hrs. Basic knowledge of concepts of economics **Prerequisites** The objectives of the course are • Understanding the principles of economics. Analyzing cost-benefit analysis. **Objectives** • Recognizing the role of markets and competition. • Understand decision making in uncertainty. • Getting introduced to Indian taxing system. After successfully completing this course, students will be able to 1. Define the basic terminologies in context to engineering economics. Course 2. Apply cost, investment and rate analysis techniques in financial matters. **Outcomes** 3. Describe the concepts in context to decision making under risk and uncertainty. 4. Describe the managerial aspects in personal and business oriented economics. Introduction to Engineering Economics: Introduction to Economics, Importance and scope of economics in engineering, Economic analysis and its role in project management, Overview of economic Unit-I principles and concepts relevant to engineering, Micro - and macro- economics, economics of growth and development, Demand and supply analysis. (6 Hrs.) Cash Flow and Time Value of Money Interest rates, compounding, and discounting, Present value and future value analysis, Equivalent annual cost analysis. Cash Flow - Diagrams, Categories & Computation, Unit-II Calculations, Treatment of Salvage Value, Annual Cash Flow Analysis, Analysis, Calculating Rate of Return, Incremental Analysis. (6 Hrs.)

Unit-III

Elements of Managerial Economics

Cost &Cost Control – Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money (present and future worth of cash-flows). Business Forecasting – Elementary techniques. (6 Hrs.)

| i'               | To understand the conc  | ept of Signals & Systems.                                 |  |  |  |
| Objectives       | To know transform tech  | nnique to analyse DTS.                                    |  |  |  |
|                  | To design digital filters.  |   |  |  |  |
|                  |   | this course, students will be able to                     |  |  |  |
|                  | 1. Classify CT & DT signa   |   |  |  |  |
| Course           | 2. Apply time domain analysis techniques to LTI systems.                            |   |  |  |  |
| Outcomes         | 3. Analyze Signals using DFT and FFT algorithms.                                    |   |  |  |  |
|                  | 4. Design FIR and IIR filter.   |   |  |  |  |
|                  | 0   | efinitions of Signals, Continuous-time signals & discrete |  |  |  |
|                  | time Analog & Digital signals   | e, Basic CT & DT signals: unit impulse, unit step, unit   |  |  |  |
|                  | ramp, complex exponential & sinusoidal, sinc, rectangular, triangular and signum,   |   |  |  |  |
| Unit-I           | Operations on signals: Time Scaling and Folding, Time Shifting, Amplitude Scaling,  |   |  |  |  |
|                  | Addition, Multiplication, Classification of Signals: even & odd signals, periodic & |   |  |  |  |
|                  | non-neriodic, energy & power.   | deterministic & non-deterministic. (6 Hrs)                |  |  |  |
| 1                | Introduction to Systems: D  | efinitions of Systems, System Representation, continuous  |  |  |  |
|                  | time Systems & discrete Sy  | ystems, system with and without memory (static and        |  |  |  |
|                  | dynamic) causal and non-cau   | sal system, linear and non-linear system, Time-invariant  |  |  |  |
| Unit-II          | and time-variant system, Stable and Unstable system, Invertible Systems.            |   |  |  |  |
|                  | (6 Hrs)   | , ,   |  |  |  |
|                  |   |   |  |  |  |
|                  | Convolution and Correlation   |   |  |  |  |
|                  | Convolution: Linear time-inva   | ariant systems: The representation of signals in terms of |  |  |  |
|                  | impulses, discrete-time LTI   | systems, properties of DT-LTI systems, Convolution:       |  |  |  |
|                  | Convolution sum & its pro   | operties, Systems described by differential, difference   |  |  |  |
| Unit-III         | equations, block diagram rej  | presentation of LTI systems described by differential-    |  |  |  |
|                  | difference equations.   |   |  |  |  |
|                  |   | and Cross-correlation of DT signals, Correlation          |  |  |  |
|                  |   | ensity (ESD), Power Spectral Density (PSD), ESD and       |  |  |  |
|                  |   | SD and PSD to Autocorrelation. (6 Hrs)                    |  |  |  |

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-V

| Course Code: ECE303 Course: Embedded Systems and VLSI Design Teaching Scheme: Lectures: 03 Hrs./Week Lectures: 03 Hrs./Week Lectures: 03 Hrs./Week Tutorial:Hr./Week  Teacher Assessment: 10 Marks Continuous Internal Evaluation: 10 Marks End Semester Examination: 50 Marks End Semester Examination: 50 Marks End Semester Examination: 10 Marks End Semester Examination: 50 Marks End Semester Examination: 10 Marks End Semester Examination: 50 Marks End Semester Examination: 10 Marks End Semester Examination: 10 Marks End Semester Examination: 50 Marks End Semester Examination: 50 Marks End Semester Examination: 10 Marks Continuous Internal Evaluation: 10 Marks End Semester Examination: 10 Marks End Semester Exa    | Syllabus of     | Third Year B. Tech Electro   | onics and Computer Engineering Semester-v              |  |  |  |
|--|-----------------|--|--|--|--|--|
| Teaching Scheme: Lectures: 03 Hrs./Week Tutorial: Hr./ Week Teacher Assessment: 10 Marks End Semester Examination: 50 Marks End Semester Examination: (Duration): 02 Hrs.  Prerequisites  Fundamentals of design of combinational and sequential digital systems.  The objectives of the course are  • To get students familiar with microcontroller and embedded system.  • To get students familiar with different real-world peripherals such as sensors, displays.  • To prepare a student to understand the VHDL language features to realize the complex digital systems.  • To design sequential and concurrent techniques in VHDL.  At the end of the course the student will be able to 1. Understand embedded system, architecture and instruction set of 8051 microcontrollers.  2. Develop various applications by interfacing various modules to 8051.  3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller - Architecture - Register set-I/O ports and Memory Organization, Instruction set, Interrupts-Timers and Counters-Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A   | Course Code: EC | E303   | Credits: $3-0-0$                                       |  |  |  |
| Lectures: 03 Hrs./ Week Tutorial: Hr./ Wee   | Course: Embedde | ed Systems and VLSI Design   |  |  |  |  |
| Teacher Assessment: 10 Marks Continuous Internal Evaluation: 10 Marks End Semester Examination: 50 Marks End Semester Examination (Duration): 02 Hrs.  Prerequisites  Fundamentals of design of combinational and sequential digital systems.  The objectives of the course are  • To get students familiar with microcontroller and embedded system.  • To get students familiar with different real-world peripherals such as sensors, displays.  • To prepare a student to understand the VHDL language features to realize the complex digital systems.  • To design sequential and concurrent techniques in VHDL.  At the end of the course the student will be able to 1. Understand embedded system, architecture and instruction set of 8051 microcontrollers.  2. Develop various applications by interfacing various modules to 8051.  3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system. Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system iffe cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A  |                 |  |  |  |  |  |

| Course Outcomes  1. Understand embedded system, architecture and instruction set of 8051 microcontrollers. 2. Develop various applications by interfacing various modules to 8051. 3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements. 4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system life cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller - Architecture - Register set -I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A   |                 | complex digital systems.   | accomment techniques in VHDI                           |  |  |  |
| Course Outcomes  1. Understand embedded system, architecture and instruction set of 8051 microcontrollers.  2. Develop various applications by interfacing various modules to 8051.  3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system life cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A  |                 | To design sequential and     At the and of the course the str                  | rdent will be able to                                  |  |  |  |
| Course Outcomes  Develop various applications by interfacing various modules to 8051.  Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication.  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A   |                 | At the end of the course the su  | system, architecture and instruction set of 8051       |  |  |  |
| Course Outcomes  2. Develop various applications by interfacing various modules to 8051.  3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A   |                 | microcontrollers.  |  |  |  |  |
| Unit-II  3. Understand and use of major syntactic elements of VHDL such as entity, architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system life cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Unit-III  Unit-III  Unit-III  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A  |                 | 2 Develop various applicat   | ions by interfacing various modules to 8051.           |  |  |  |
| unit-II  architecture, common concurrent and common sequential statements.  4. Design different logic circuits in different types of modeling.  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system iffe cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A  | Outcomes        | 3. Understand and use of   | f major syntactic elements of VHDL such as entity,     |  |  |  |
| Unit-II  Introduction to Embedded system: Difference between Microprocessor and Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system life cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A   |                 | architecture, common co  | oncurrent and common sequential statements.            |  |  |  |
| Unit-II  Microcontroller, Von-Neuman and Harvard architecture, RISC and CISC processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded system life cycle, Core of Embedded System, Examples of Embedded Systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.)  Interfacing and Applications of 8051: LEDs and Push buttons Interfacing, Relays and Keyboard interfacing, Seven Segment display interfacing, A/D and D/A  |                 | 4. Design different logic ci   | reuits in different types of modeling.                 |  |  |  |
| Unit-II  Unit-II  processor, Embedded system definition, Difference between General computing system and Embedded system, Classification of Embedded system, Embedded systems (6 Hrs.)  Introduction to 8051 Micro Controller: Overview of 8051 Micro Controller – Architecture— Register set—I/O ports and Memory Organization, Instruction set, Interrupts—Timers and Counters—Serial Communication. (6 Hrs.) |   |  | End Semester Examination (Duration): 02 Hrs.  |  |  |
|   | ** 1   |   |  |  |
| Prerequisites   |  | Memory & Computer Organization                |  |  |
| <ul> <li>The objectives of the course are</li> <li>To introduce students with the basic concepts of Operating System, its functions and services.</li> <li>To familiarize the students with various views and management policies adopted by Operating system as pertaining with processes, Deadlock, memory, File and I/O operations.</li> <li>To brief the students about functionality of various OS like UNIX, Linux and</li> <li>Windows XP as pertaining to resource management.</li> <li>To provide the knowledge of basic concepts towards process synchronization</li> </ul> |  |   |  |  |
|   | and related issues.  At the end of the course the stude  | ent will be able to                           |  |  |
| Course<br>Outcomes  | 1. Identify the role of an operating system as system software. 2. Explain use of given operating system tool.   |   |  |  |
| Unit-I  | Introduction to OS: An Operating system, Layered Architecture, Objectives and function, Types of OS's, Evolution of OS, OS as a resource Manager, Concept of Kernel, OS as an interface. Case Study: Types of OSs along with their Versions-Windows, Unix, Linux, DOS, Macintosh etc. with basic shell commands (6Hrs)   |   |  |  |
| Unit-II   | The Process: Process concept, operations on process, Process scheduling: basic concepts, scheduling criteria, Scheduling algorithms: Pre-emptive, Non-pre-emptive, FCFS, SJF, SRTF, Priority based, Round Robin, Multilevel Queue scheduling. Case Study: Classical problems of Synchronization: The Producer Consumer Problem: Readers writers problem, Semaphores, Dinning Philosopher Problem. (6Hrs) |   |  |  |
| Process Synchronization: Background, the critical section problem, Peterson Solution, Synchronization Hardware, Semaphores. Deadlock: The Problem, Deadlock Characterization, Deadlock necessary Conditions, Resource Allocation Grap Deadlock Prevention. Deadlock avoidance, Deadlock recovery, Deadlock Detection Case Study: Banker's algorithm for single & multiple resources.  |  |   |  |  |

| Unit-IV    | Memory contiguous   | Management: Memory Memory allocation Te   | chniques- First III,                               | Best Itt, West           | (6Hrs)                     |
|------------|---|---|--|--------------------------|----------------------------|
| Unit-V     | Virtual me<br>write, Pag  | page tables, segmentation management: Page replacement policies assed, Allocation of fram | aging and Segmentation  FIFO, Optimal,  Thrashing. | Exc, Exc 141             | (6Hrs)                     |
| Unit-VI    | File Management: File Management Subsystem Need, File and Directory structures, blocks and fragments, directory tree, i-nodes, file descriptors. Case Study: UNIX file structure & Windows File Structure.  Publication Edition |   |  |                          |                            |
|            | Sr. No.   | Title   | Author   | Publication              |                            |
|            | 1   | Operating Systems Concepts  | Silberschatz ,<br>Galvin                           | Jon Willey and<br>Sons   | 9 <sup>th</sup><br>Edition |
| ıces       | 2   | Operating Systems   | Godbole, Achyut                                    | ТМН                      | 2015                       |
| References | 3   | Operating Systems: Internals and Design Principle   | William ,<br>Stallings                             | Pearson                  | Edition<br>2015            |
|            | 4   | Unix Concept and Programming  | Das, Sumitabha                                     | McGraw Hill<br>Education | 2015                       |

### **Faculty of Science and Technology**

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-V

Course Code: ECE324

Course: Lab-IV: Seminar

**Teaching Scheme:** 

**Objectives** 

Practical: 02 Hrs/week

Credits: 0-0-1

ESE/Oral: 25 Marks

• To encourage the students to study advanced engineering developments.

• To develop skills in doing literature survey, technical presentation and report preparation.

• To prepare and present technical reports.

• To encourage the students to use various teaching aids such as power point

presentation and demonstrative models.

Each student shall identify a topic of current relevance in his/her branch of engineering, get approval of faculty concerned. To encourage and motivate the students to read and collect recent and reliable information about their area of interest confined to the relevant discipline, from technical publications including peer reviewed journals, conferences, books, project reports etc., prepare a report based on a central theme and present it before a peer audience. Each student shall present the seminar for about 20 minutes duration on the selected topic. The report and the presentation shall be evaluated by a team of faculty members comprising Academic coordinator for that program, seminar coordinator and seminar guide based on style of presentation, technical content, adequacy of references, depth of knowledge and overall quality of the report. A Faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Evaluation

Guidelines

Distribution of marks for the seminar is as follows: i. Topic Selection and Technical Contents: 30 % ii. Presentation: 20%, iii. Ability to answer questions: 20% & iv.

Report: 30%).

Evaluation is based on rubrics prepared based on above guidelines.

### Faculty of Science and Technology

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-V Credits: 0-0-1Course Code: ECE325 Teacher's Assessment: 25 Marks Course: Lab-V: Experience Based Learning **Teaching Scheme:** Practical: 02Hrs/week 1. To promote professional skills and knowledge through hands on experience. **Objectives** 2. To inculcate independent learning by problem solving with social context. The following attributes are necessary in some combination, The goal of experience-based learning involves something personally significant or meaningful to the students. Students should be personally engaged. Reflective thought and opportunities for students to write or discuss their Attributes experiences should be ongoing throughout the process. The whole person is involved, meaning not just their intellect but also their senses,

#### 4 Stages of Experiential Learning Cycle

their feelings and their personalities.

#### 1. Concrete Experience:

It describes the hands-on experiences that it is learn from. It's here that to try new things, face problems and step out of our comfort zone.

Students should be recognised for prior learning they bring into the process.

#### 2. Reflective Observation

Guidelines

Next, it is needed to reflect to learn from the experiences. The 'reflective observation' phase of the experiential learning cycle is all about reflection on the experiences which include both action and feelings. It is a stage get to reflect on what went right and what could be improved? It's also a chance to observe how it could have been done differently and to learn from each other.

#### 3. Abstract Conceptualization

Once it has been identified and understood the defining characteristics of an experience, it can decide on what can be done differently next time. This is a time for planning and brainstorming steps for success.

#### 4. Active Experimentation

Chairman Board of Studies Electronics & Computer Engineering MIT Aurangabad (An Autonomous Institute)

Master Copy

Page 15 of 52

### 4. Active Experimentation

The active experimentation phase of the learning cycle is where the experimentation with the ideas is done. It's time to put the plan of action to the test in the real world. The active experimentation phase of the learning cycle is where there is need to experiment with the ideas. It's time to put plan of action to the test in the real world. Following activities may be performed under experience-based learning.

- Role Play
- Case Studies
- Field Visits
- Undergraduate Research
- Question generating activity
- Fishbowl
- Make a Mnemonic
- Peer Group Learning
- Group 'Change' Projects
- Creative Problem-Solving

#### Assessment:

Assessment will be done through following ways.

- Creating a reflective journal or a portfolio
- Essay, report, or presentation (could be arts-based, multimedia or oral) on what has been learnt
- Short answers to questions of a 'why' or 'explain' nature
- One-on-one oral assessments with the instructor
- A project that develops ideas further (individually or in small groups)
- Self-evaluation and/or group evaluation of a task performed

Rubrics shall be prepared for the activities in which the performance is to be evaluated. During process of monitoring and continuous assessment and evaluation the individual and team performance is to be measured. EBL is monitored and continuous assessment is done by mentor and authorities.

#### Faculty of Science and Technology Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-V Credits: 0-0-1Course Code: ECE326 Course: Lab-VI: Development of Skills Teacher Assessment (TA): 25 Marks (Computational) - MATLAB **Teaching Scheme:** Practical: 02 Hrs./ Week Basic knowledge of mathematical concepts such as calculus, linear algebra, and differential equations. **Prerequisites** The objectives of the course are • To introduce students to MATLAB as a powerful computational tool for solving engineering problems. To develop students' proficiency in utilizing MATLAB for data analysis, **Objectives** numerical computations, and simulation tasks relevant to Electronics and Computer Engineering. At the end of the course the student will be able to 1. Demonstrate an understanding of MATLAB's fundamental concepts and syntax, enabling them to write efficient and error-free MATLAB code. Course 2. Apply MATLAB to solve engineering problems, perform data analysis, and Outcomes create simulations relevant to Electronics and Computer Engineering. The Development of Skills (Computational) - MATLAB course will cover the minimum 10 experiments on following topics: 1. Introduction to MATLAB: Understanding the significance of MATLAB in engineering applications. Familiarizing with the MATLAB environment. 2. MATLAB Basics: MATLAB syntax, data types, and variables. Operators and expressions in MATLAB. 3. Input and Output Operations: Reading data from external files. Writing data to external files. Interacting with users through input/output commands. 4. Control Statements: Conditional statements (if-else, switch-case). Looping statements (for, while). 5. Functions and Scripting: Creating user-defined functions in MATLAB. List of Developing MATLAB scripts to automate tasks. **Experiments** 6. Data Visualization: Generating 2D and 3D plots using MATLAB plotting functions. Customizing plots for better visualization. 7. Numerical Computing: Solving algebraic equations and systems of linear equations. Numerical integration and differentiation. 8. Symbolic Computing: Performing symbolic computations using MATLAB's Symbolic Math Toolbox. Symbolic algebra, calculus, and simplifications. 9. Data Analysis and Visualization: Importing and preprocessing data for analysis Exploratory data analysis using MATLAB. 10. Simulation and Model Building: Developing simulations for engineering systems and models. Analyzing system behavior using simulation results.

#### Faculty of Science and Technology

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-VI

Course Code: ECE353
Course: Software Engineering
Teaching Scheme:

Lectures: 3 Hrs./ Week

Tutorial: -- Hrs./ Week

Mid Semester Examination-II: 15 Marks

Mid Semester Examination-II: 15 Marks

Teacher Assessment: 10 Marks

Continuous Internal Evaluation: 10 Marks

End Semester Examination: 50 Marks

End Semester Examination (Duration): 02 Hrs.

|                    | End Semester Examination (Duration): 02 Hrs.  |
|--------------------|---|
| Prerequisites      | Data Base Management, Data Structure, Object Oriented Programming   |
| Objectives         | The objectives of the course is  • To understand the Concepts of Software Engineering   |
| Course<br>Outcomes | At the end of the course the student will be able to  1. Identify requirements & assess the process models.  2. Plan, schedule and track the progress of the projects.  3. Design the software projects.  4. Do testing of software project.  |
| Unit-I             | Introduction: The evolving role of software, changing nature of software, software myths. Types of software, characteristics of Software, attributes of good software, Generic view of process: Software engineering- a layered technology, a process framework, basic software model.  (6 Hrs.)  |
| Unit-II            | Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document. Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management. System models: Context models, behavioral models, data models, object models.  (6 Hrs.) |
| Unit-III           | <b>Design Engineering</b> : Design process and design quality, design concepts, the design model. Creating an architectural design: software architecture, data design, architectural styles and patterns, architectural design. (6 Hrs.)   |
| Unit-IV            | Project Management: Process, Metrics, Estimations, Project Management Concepts: The Management Spectrum, People, Product, Process, Project, The W5HH Principle, Metrics in the Process and Project Domains, Project Estimation: Project Planning Process, Software Scope and feasibility, Resources: Human Resources, Reusable software, Environmental Resources.  (6 Hrs.)                                     |

|            | Metrics                     | for Process and Products:  |  |   |                      |
|------------|-----------------------------|--|--|---|----------------------|
| Unit-V     | Project Managem Identificat | Measurement: size & fundand Software Quality, Puent: Reactive versus Progion, Risk Projection, Risk agement, The RMM Plan.               | roject Risk Mar<br>active Risk Strate                              | agement: Risk An<br>egies, Software Ris                   | alysis &<br>ks, Risk |
| Unit-VI    | assurance<br>Introducti     | Quality Management: Into, software reviews, formal, software reliability, the IS on to software testing: Detecting method: black-box and | I technical review<br>O 9000 quality sta-<br>efine testing, testin | s, statistical softwar<br>ndards.<br>g lifecycle, types o | e quality            |

#### (Faculty of Science & Technology)

Syllabus of T. Y. B. Tech. Computer Science and Engineering (Semester VI)

Course Code: CSE392

Course: Open Elective-III:

Digital Marketing /

Teaching Scheme:

Theory: 3 Hrs/week

Credits: 3-0-0

Mid Semester Examination-I: 1.5 Marks Mid

Semester Examination-II: 15 Marks

Continuous Internal Evaluation: 10 Marks

Teacher Assessment: 10 Marks

End Semester Examination: 50 Marks

|               |  | End Semester Examination (Duration): 2 Hr     | rs .           |
|---------------|--|---|----------------|
| Prerequisites | Basic Understanding of Digital Marketing     |   |                |
|               | 1. To understand the bas                     | ic concept of digital marketing               |                |
| Objectives    | 2. To understand the con                     | cept of search engine optimization.           |                |
|               | 3. Implement Social Med                      | dia Optimization                              | E .            |
|               | 4. Discuss the concept of google advertising |   |                |
|               | Digital Marketing Introduct                  | ion   |                |
|               | Concept of Digital Marketin                  | ng, Use of Digital Marketing, Digital Market  | ting Platform, |
| Unit-I        | Digital Marketing Strategy,                  | Types of Digital Marketing - Organic &        | Paid, Digital  |
|               | Marketing VS Traditional M                   | arketing. How is it different from traditions | al marketing,  |
|               | ROI between Digital and tra                  | ditional Marketing.                           | (7 Hrs)        |
|               | Search Engine Optimization                   | (SEO)   |                |
| Unit-II       | Introduction of SEO, Search I                | Engine working, SEO Tools Web position        | Analysis,      |
|               | Competition Analysis, Google                 | e Algorithms and Updates.                     | (6 Hrs)        |
|               | Social Media Optimization                    | (SMO)   |                |
|               | Facebook - Profile Creations                 | , Creating groups and pages, Tips and Guides  | s, Posts And   |
|               | promotions, Events Creations                 | , Video Marketing, Promotional Techniques     | s, Integration |
|               | Techniques. Twitter -Set-up                  | and usage Tips, Promoted Tweets, Video        | Marketing,     |
| Unit-III      | Promotional Techniques, Inter                | gration Techniques, Analytics.                |                |
|               |  |   |                |
|               | LinkedIn-Profile Creations,                  | Company Page Creations, Tips and Guide        | es, LinkedIn   |
|               |  | LinkedIn Groups, Video Marketing,             |                |

| Teaching Schen  | me:   | Mid Semester Examination-II: 15 Marks                  |  |  |
| Lectures: 3 F   | Irs./ Week  | Teacher Assessment: 10 Marks                           |  |  |
| Tutorial: - H   | r./ Week  | Continuous Internal Evaluation: 10 Marks               |  |  |
|                 |   | End Semester Examination: 50 Marks                     |  |  |
|                 |   | End Semester Examination (Duration): 02 Hrs.           |  |  |
| Prerequisites   | Programming Concepts, Data Structure, Basic Linear Algebra, Basic Probability a Statistics. |  |  |  |
|                 | The objectives of the course are  |  |  |  |
| Objectives      | Give an introduction to data science and its applications.                                  |  |  |  |
| Objectives      | Understand use of statistics in data science  |  |  |  |
|                 | Use data science to analyze large and unstructured data with different tools                |  |  |  |
|                 | At the end of the course the stud   |  |  |  |
|                 |   | ental concepts and principles of data science.         |  |  |
|                 |   | * * *  |  |  |
| Course          | 2. Apply data preprocessing techniques to clean and prepare data for analysis.              |  |  |  |
| Outcomes        | 3. Perform statistical analysis and interpret the results.                                  |  |  |  |
|                 | 4. Implement and evaluate machine learning algorithms for data prediction and               |  |  |  |
|                 | classification.   |  |  |  |
|                 | Introduction to Data Science:   |  |  |  |
|                 |   | its terminologies Applications of Data Science Role of |  |  |
| Unit-I          | Overview of Data science and its terminologies, Applications of Data Science, Role of       |  |  |  |
|                 | Data science in emerging technologies. Data types and Data sources, Data                    |  |  |  |
|                 | preprocessing techniques, Statistical concepts for Data Science. (6 Hrs.)                   |  |  |  |
|                 | Machine Learning for Data Sc  | ience:   |  |  |
|                 | Introduction to machine learning  | ng algorithms, Supervised learning: linear regression, |  |  |
| TI W TT         | logistic regression, decision trees, and random forests, Unsupervised learning:             |  |  |  |
| Unit-II         | clustering algorithms, dimensionality reduction, Feature generation and selection using     |  |  |  |
|                 | Machine learning. (6 Hrs.)  |  |  |  |
|                 | Widefine Carring.   | (0 1115.)  |  |  |
|                 | Data Visualization and Comm   | unication:   |  |  |
|                 | Principles of data visualization.   | Exploratory data analysis using visual techniques      |  |  |
|                 |   |  |  |  |
| Unit-III        | Tools and libraries for data visualization.   |  |  |  |
| Omt-III         | Mining Social Networks: Social Networks graphs, clustering of graphs, direct                |  |  |  |
|                 | discoveries of communities in graphs, analyze the portioning of graphs, the                 |  |  |  |
|                 | neighborhood properties of grapl  | ns. (6 Hrs.)   |  |  |

|                 | The objectives of the course are   |  |  |
|                 | • The objective of this  | course is to introduce students to the fundamental     |  |
| Objectives      | concepts and principles of   | of control systems.                                    |  |
|                 | Students will develop as   | n understanding of the analysis and design of control  |  |
|                 |  | lomain and frequency-domain techniques.                |  |
|                 | At the end of the course the stude   |  |  |
|                 |  | cepts and terminology of control systems.              |  |
| Course          |  |  |  |
| Outcomes        | 2. Analyze linear time-invariant (LTI) systems using Laplace transforms and transfer functions.  |  |  |
| Outcomes        |  | and control contains when the land and                 |  |
|                 | <ul><li>3. Design and analyze feedback control systems using time-domain techniques.</li><li>4. Analyze control system stability using Routh-Hurwitz and Nyquist criteria.</li></ul> |  |  |
|                 |  |  |  |
|                 | Introduction to Control Systems  |  |  |
| Unit-I          | Definition and classification of control systems, Feedback and feedforward control,  |  |  |
|                 | Open-loop System, closed-loop control and their examples. Distinguish between open   |  |  |
|                 | and close system. Laplace transforms. (6 Hrs.)   |  |  |
|                 | Mathematical Modeling of Dyr   | namic Systems  |  |
| Unit-II         | Differential equations and transfer functions, Advantages, Disadvantages and   |  |  |
| ОЩ-11           | Properties of Transfer function, transfer function representation, Block diagrams and  |  |  |
|                 | signal flow graphs, State-space re   |  |  |
|                 | Time-Domain Analysis   |  |  |
|                 | · ·  | sponse analysis. Time constant and system behavior.    |  |
|                 | Transient and steady-state response, Second-order system characteristics: Step   |  |  |
| Unit-III        | response analysis. Natural frequency and damping ratio. Undamped, underdamped,   |  |  |
| Oint-III        |  |  |  |
|                 |  | aped systems Performance specifications: Rise time,    |  |
|                 | settling time, peak time, and peak overshoot. Steady-state error and error constants.  |  |  |
|                 | Introduction to error analysis.  | (6 Hrs.)   |  |
|                 | Stability Analysis:  |  |  |
| ***             |  | onditions based on the Routh array, Application of     |  |
| Unit-IV         | the Routh-Hurwitz criterion to   | analyze system stability. Nyquist stability criterion, |  |
|                 | Application of stability criteria to   |  |  |
|                 | 12   | (O 1113.)  |  |

Course: OE-III Operations Research

Teaching Scheme:

Continues Internal Evaluation: 10 Marks

Theory: 03 Hrs/week

Teacher Assessment: 10 Marks

| Theory: 03 Firs | /week   | Teacher Assessment: 10 Marks                     |                  |  |  |
|-----------------|---|--|------------------|--|--|
| Credits: 3-0-0  |   | End Semester Examination: 50 Marks               |                  |  |  |
|                 |   | End Semester Examination (Duration): 2           | Hrs              |  |  |
|                 | 1. To familiarize the stude   | nts with formal quantitative approach to probl   | em solving       |  |  |
| Objectives      | 2. To formulate real life er  | ngineering problems                              |                  |  |  |
|                 | 3. To solve engineering pr  | oblems using various Operations Research Te      | chniques         |  |  |
|                 | Introduction to Operations R  | esearch:   |                  |  |  |
| Unit-I          | Basics definition, scope, objecti   | ves, phases, models, applications and limitation | ons of Operation |  |  |
|                 | Research.   | (0   | 2 Hrs)           |  |  |
|                 | Linear Programming Problen  | n:   |                  |  |  |
| Unit-II         | Formulation of LPP, Graphical s   | solution of LPP, Simplex Method, Artificial v    | ariables, Big-M  |  |  |
| Cint-11         | method, two-phase method, deg   | eneracy and unbound solutions.                   | (08 Hrs)         |  |  |
|                 | Transportation Model:   |  |                  |  |  |
|                 | Transportation Problem: Formu   | ulation, solution, unbalanced Transportation     | problem. Findin  |  |  |
| Unit-III        | basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation |  |                  |  |  |
|                 | method. Optimality test - the   | stepping stone method or MODI method             | Degeneracy i     |  |  |
|                 | Transportation Problem.   |  | (08 Hrs)         |  |  |
|                 | Assignment Problem: Hungar  | rian Method to solve Assignment Problem, Tra     | velling Salesma  |  |  |
| Unit-IV         | as an Extension of Assignment F   | Problem.   | (04 Hrs          |  |  |
|                 | Queuing model and Sequenci  | ing model:                                       |                  |  |  |
|                 | Queuing Systems And Structu   | ures, Notation Parameters, Single Server a       | nd Multi Serve   |  |  |
| Unit-V          | Models, Poisson Input, Exponen  | tial Service, Constant Rate Service, Infinite P  | opulation        |  |  |
|                 | Sequencing Model: Introduction,   | , n jobs through two machines, n jobs through    | three machines   |  |  |
|                 | two jobs through m machines an  | nd n jobs through m machines.                    | (06 Hrs)         |  |  |
| Unit-VI         | Network Models: Fulkerson's   | rule, concept and types of floats, float calcul  | ations, CPM an   |  |  |
| CIMI-A1         | DEDT Constitue and and anothing   | as Materials                                     | (00 II           |  |  |

PERT, Crashing cost and crashing Network.

| and Circular Economy                        |   | Mid Semester Examination-II: 15 Marks      |  |
| Teaching Scheme: 03 hrs/week                |   | Continuous Internal Evaluation: 10 Marks   |  |
|   |   |  |  |
| Theory: 03 hrs/week                         |   | Teacher Assessment: 10 Marks               |  |
| Tutorial: N.A.                              |   | End Semester Examination: 50 Marks         |  |
|   |   | End Semester Examination (Duration): 2 Hrs |  |
| Prerequisite                                | Plastic materials, processing, rheology, basics of polymer technology and designing   |  |  |
| Objectives                                  | <ul> <li>It aims to provide students with a comprehensive understanding of sustainable practices and the principles of the circular economy within the context of polymer engineering.</li> <li>Students will explore various strategies, technologies, and policies for achieving sustainability, reducing environmental impact, and promoting circularity in the polymer industry.</li> <li>The course will emphasize the importance of integrating sustainable principles in the design, production, and disposal of polymer materials.</li> </ul> |  |  |
| Unit-I                                      | Topic Title: Introduction to Waste Management and Circular Economy  |  |  |
|   | Definition and significance of sustainability in polymers, basics of waste management, principles and goals of the circular economy, environmental, social, and economic dimensions of waste management, life cycle thinking and assessment in plastics.  (04 Hrs)  |  |  |
| Unit-II                                     | Topic Title: Waste generation, composition, and management  |  |  |
|   | Sources and types of plastic and polymer waste, composition analysis and characterization of waste, quantification and assessment of waste generation, waste management and treatment methods: MSWM processing and plastics waste management comprising of waste hierarchy i.e., prevention, minimization, reuse, recycling, energy recovery, and disposal. (08 Hrs)  |  |  |
| Unit-III                                    | nit-III Topic Title: Sustainable Polymer Processing   |  |  |
|   | Energy-efficient processing techniques, clean and green manufacturing practices, waste reduction and recycling in polymer processing, sustainable additives and processing aids  (06 Hrs)   |  |  |
| Unit-IV                                     | Topic Title: Sustainable Waste Management and Disposal  |  |  |
|   | Waste characterization and classification in polymers, mechanical recycling, waste-to-energy conversion technologies, biological treatment methods for polymer waste, hazardous waste management and regulations, sustainable landfilling and waste disposal practices  (06 Hrs)  |  |  |

| Unit-V      | _  | Topic Title: Circular Economy Strategies   |   |                                 |                                     |  |

## Faculty of Science and Technology Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-VI

Course Code: ECE371 Credits: 0-0-1Course: Lab-I: Computer Network & Security Teachers Assessment: 25 Marks Teaching Scheme: Practical: 02 Hrs./ Week **Prerequisites** Communication Engineering The objectives of the course are To understand computer network topologies and types of network. **Objectives** To develop an understanding of various protocols. To use modern tools for network traffic analysis and security analysis. At the end of the course the student will be able to 1. Analyze networks using simulation tools. Course **Outcomes** 2. Demonstrate various security schemes using simulation tools. 1. Configure network topologies using packet tracer tool. 2. Design of web page design using HTML. 3. Design and analyze network and backbone using simulation tools. 4. Demonstrate LAN and data transfer through router. 5. Analyze Address Resolution Protocol and Reverse Address Resolution Protocol. List of **Experiments** 6. Study and analyze performance of FTP & SMTP, SNMP protocols. 7. Write program for detection error and correction (Parity code

check/CRC/Hamming code).

8. Analyze ciphers using Cryptool.

9. Analyze HMAC using Cryptool.

10. Analyze digital signatures.

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-VI

Credits: 0-0-1

| Course: Lab-II: Industrial IOT |  | Teachers Assessment: 25 Marks  |  |
|--------------------------------|--|--|--|
| Teaching Scheme:               |  | h .  |  |
| Practical: 02 Hr               | s./ Week   |  |  |
| Prerequisites                  | Basic knowledge of Electronics and programming   |  |  |
| Objectives                     | <ul> <li>The objectives of the course are</li> <li>Gain hands-on experience in implementing IIoT systems using popular hardware platforms and communication protocols.</li> <li>Explore various sensors and actuators used in IIoT applications and their integration with microcontrollers and development boards.</li> </ul> |  |  |
| Course<br>Outcomes             | At the end of the course the student 1. Apply practical skills to  | t will be able to interface embedded boards with components, n order to facilitate communication and data  |  |
|                                | <ol> <li>Flashing the OS on to the desktop environment with r</li> <li>Write an application to temperature crosses thresho</li> <li>Write a program to detect indicator.</li> <li>Create a simple web interfacemotely through the interface</li> </ol>   | e device into a stable functional state by porting necessary packages.  read temperature from the environment. If ld value, then it notifies with buzzer. et obstacle using IR sensor and notify it using face using NodeMCU 1.0 to control the actuator ce.  erface using NodeMCU 1.0 to monitor sensor |  |

#### List of **Experiments**

- 6. Write an application using Raspberry Pi/Arduino for smart health monitoring system which records heart beat rate and temperature.
- 7. Write a network application for communication between two devices using LoRA module to on and off remote water pump.
- 8. Build an application using the light sensors, monitor the surrounding light intensity & automatically turn ON/OFF the high intensity LED's by taking some pre-defined threshold light intensity value.
- 9. Build a weather monitoring system using humidity, temperature and raindrop sensor and Raspberry Pi/Arduino board.
- monitoring of boiler parameters using Raspberry Pi/Arduino 10. Build board/NodeMCU.

Syllabus of Third Year B. Tech Electronics and Computer Engineering Semester-VI

Course Code: ECE373

Credits: 0 - 0 - 1

Course: Lab-III Software Engineering

ESE/Oral: 25 Marks

**Teaching Scheme:** 

Practical: 02 Hrs./ Week

| Practical: 02 H        | rs./ Week  |  |
|------------------------|--|--|
| Prerequisites          | Data Base Management, Data Structure, Object Oriented Programming  |  |
| Objectives             | The objectives of the course are  To solve real life problems by applying software engineering principles  To impart state-of-the-art knowledge on Software Engineering  |  |
| Course<br>Outcomes     | At the end of the course the student will be able to  1. Identify requirements and apply software process model to selected case study.  2. Develop architectural models for the selected case study.  |  |
| List of<br>Experiments | <ol> <li>Preparing Software Requirements Specifications</li> <li>Design data flow diagram</li> <li>Design use case Diagrams</li> <li>Design activity Diagrams</li> <li>Design of sequence Diagrams</li> <li>Design State chart Diagrams</li> <li>Design component Diagrams</li> <li>Design class and object Diagrams</li> <li>Design a test plan for given scenario</li> </ol> |  |
|                        | 10. Perform estimation of project using FP estimation for given system.  |  |

| Teaching Scheme: ESE/Oral: 25 Marks     |   | ESE/Oral: 25 Marks                       |  |
| Practical: 04 l                         | Hrs/week  | *  |  |
| Objectives                              | Solve a real life societal problem three  | ough research based approaches           |  |
| Course<br>Outcome                       | At the end of the course the student will be able to  1. Formulate an analytical model for an engineering problem and obtain its solution with necessary tools.  2. Perform and manage as an individual or as a member of a team with ethical values.  3. Examine the concepts of environment and sustainability  4. Write effective reports and communicate effectively on civil engineering problems.  5. Present the conclusions in a way to benefit the society.  |  |  |
| Instructions<br>to Students             | Solving a real life problem should be the focus of under graduate projects. Faculty members should prepare project briefs (giving scope and references) well in advance which should be made available to the students at the departmental level. The project may be classified as hardware / software / modelling / simulation. It may comprise any elements such as analysis, design, synthesis, validation etc. Interdisciplinary/Multidisciplinary projects are encouraged.   |  |  |
| Guidelines                              | The department will appoint a project coordinator who will coordinate the following.  1. Grouping of students (a maximum of 3/4 in a group)  2. Allotment of projects and project guides  3. Project monitoring at regular intervals.  All projects allotments are to be completed as given in the Academic Calendar.  All projects will be monitored at least twice in a semester through students' presentation and will be conducted as per Academic Calendar.  Distribution of marks for TA shall be as follows:  Problem Statement 10; Literature Review 10; Group formation and identification of individual responsibility 10; Objective of Project activity 10; Knowledge of domain, technology and tools being used 10  For TA 50 Marks to be converted to 25 Marks. |  |  |

Distribution of marks for ESE/Oral shall be as follows:

Realization of project as per problem statement 10; Design & Testing 30; Documentation and Report Writing 20; Quality of Work 15; Performance in Question & Answers Session 15; Timely Completion of Project work 10

#### For ESE/Oral - 100 Marks to be converted to 25 Marks.

Efforts be made to carry out industry based/ Societal Projects. Problems can also be invited from the industries/Society to be worked out through undergraduate projects.

In case of Interdisciplinary/Multidisciplinary Projects, as per the requirements, a greater number of Guides may be appointed. A Joint committee of involved departments shall conduct the review of the students.

The students shall aim promote their project work project exhibitions/competitions, presentation/publication paper in reputed iournals and conferences.

The relevance of project and implementation including details of attainment of POs and PSOs addressed through the projects with justification must be clearly stated.

Phases of Major Project - I:

Phase I: Need Statement, Literature Review, data collection, Problem Statement, Objectives, Scope, Analysis/Framework/ Algorithm

Phase II: Details of Hardware & Software, Methodology, and Implementation plan for next semester.

Phase III: Submission of report of project work.
